

InteliChart[®] | HIE Solutions

**A Single Platform for Patient Engagement
and Health Information Exchange**

Providing the Platform for Patient Engagement to Information Exchange

A Smart HIE Solution

InteliChart provides a “transitional” HIE solution by allowing organizations to leverage the infrastructure established with the InteliChart Patient Portal as the foundation for their HIE.

The InteliChart Connected Health Platform establishes all the necessary API, web-services, and interface connections with acute and ambulatory EHRs and standardizes all clinical data to one aggregated registry.

The InteliChart registry allows patients to view all their clinical data through one patient portal - and it provides hospitals and physician practices with a 360-degree view of all patient data.

The Power of a Single Platform

Now patients are engaging in managing their own health on the same platform where providers and hospitals are viewing aggregated patient records. Never before has an HIE solution been so seamless, while providing the runway for future initiatives such as care coordination, population health management and ACO solutions.

ONC-CERTIFIED

The IntelliChart platform is fully certified by the Office of the National Coordinator for Health Information Technology (ONC).

Providing your organization the platform for a successful HIE solution

DirectTrust Secure Messaging.

In addition to our full HIE solution, IntelliChart allows providers to exchange CCDs via a certified DirectTrust HISP.

Future Meaningful Use Stages.

IntelliChart is a 2014 ONC Certified solution and remains committed to continuing its ONC certifications to ensure your compliance with current and future Meaningful Use requirements.

Vendor APIs.

IntelliChart can collect and exchange data with virtually any acute and ambulatory EHR system available today through proprietary APIs, web services and interface technology.

Semantic Standardized Patient Data.

IntelliChart standardizes clinical data collected from various acute and ambulatory EHR systems to standards such as SNOMED CT, LOINC, and RX Norm.

360-Degree Patient Record.

Providers can now view a comprehensive and complete patient record at each stage of the care cycle, including patient entered data and collective provider EHR data.

Manage Patient Care Transitions.

Now patients' clinical data will follow them as they move throughout the care continuum, with no information lost during each care transition.

HIE Today -

Care Coordination and ACOs Tomorrow.

The IntelliChart Connected Health Platform enables a natural progression from patient engagement, to health information exchange, to care coordination and ACO initiatives.

Other IntelliChart® Slicks

We offer many solutions to fit all your needs.

Reseller

IntelliChart resellers can offer their customers the same feature-rich, technologically advanced solutions sold by IntelliChart, but branded as their own. This is an ideal option for companies seeking additional revenue without the need to develop new products.

Patient Portal

The IntelliChart Patient Portal gives patients an easy way to stay connected with their providers and better manage their own healthcare. At the same time, providers gain a vendor-neutral, ONC-certified solution that satisfies Meaningful Use Stage 2 requirements.

OEM Partner

As an IntelliChart OEM Partner, vendors no longer need to build every component of their solutions. Instead, vendors can incorporate IntelliChart technology into their products while keeping their own branding.

Mobile

With the IntelliChart Patient Portal now available on mobile devices, patients have anywhere, anytime access to their healthcare, including the ability to update their health records, stay in touch with their providers, and schedule appointments—all with the convenience of their mobile device.
